Guthrie Corning Hospital is a voluntary, non-profit 501(c)(3) corporation, located at One Guthrie Drive, Corning, N.Y. The Hospital is committed to providing clinical and service excellence, wellness support and education, and health care leadership to the communities it serves.

Guthrie Corning Hospital is a member of The Guthrie Clinic (Guthrie), a non-profit integrated health system serving patients in an 11-county region of Northeastern Pennsylvania and the Southern Tier of New York State. Guthrie is comprised of a research institute, home care/hospice, hospitals in Sayre, Pa., Corning, N.Y., Towanda, Pa., and Troy, Pa., as well as a multi-specialty group practice of more than 290 physicians and 176 mid-level providers. Guthrie provides sub-specialty and primary care services through a network of 32 regional provider offices located in 23 communities. Guthrie offers a wide range of services and programs designed to enhance the health and well-being of those it serves.

Guthrie Mission Statement: Guthrie works with the communities we serve to help each person attain optimal, life-long health and well-being. Guthrie will do so by providing integrated, clinically-advanced services that prevent, diagnose, and treat disease, within an environment of compassion, learning and discovery.

Corning Hospital is a full-service, 65-bed community hospital providing care to a primary service area of Steuben and Chemung Counties, N.Y. The Hospital is a New York State designated Stroke Center and offers a broad range of inpatient and outpatient services, including advanced care delivered in collaboration with Guthrie physicians and specialists. The Hospital opened its new, state-of-the-art facility in July of 2014, and includes ambulatory surgery services, Guthrie Breast Care Center, Guthrie Cancer Center, Guthrie Wound Care Center, coronary care, cardiology stress testing and outpatient rehabilitation. Additional services include endoscopy procedures, laboratory services, labor and delivery care, imaging services, musculoskeletal services and medical/surgical and intensive care services.

In Fiscal Year 2016, the Emergency Department treated 26,791 patients (includes patients admitted to the Hospital from the Emergency Department); and provided 98,718 outpatient visits (includes ED patients treated and released and same day surgeries), 9,531 outpatient surgeries; and 4,826 inpatient admissions (includes 555 births).

IDENTIFICATION OF PUBLIC HEALTH PRIORITIES

Community Health Needs Assessment
A Community Health Assessment was recently completed for the period 2016 to 2018 for the counties included in the S2AY Rural Health Network (Seneca, Schuyler, Steuben, Ontario, Wayne and Yates) and continues to be used to identify and compare data between Network counties, develop common objectives, and identify collaborative opportunities. Similarly, a broader-based Community Health Assessment was completed for all Guthrie hospitals relative to the communities they serve. The priorities selected by the Steuben County Health Priorities Team, now known as...
"Smart Steuben," continue to align well with the Hospital’s current efforts to insure that community health needs are met as well as guide new initiatives under discussion with community partners.

The priority areas being addressed by Guthrie Corning Hospital are:
  - Reduce Obesity in Adults and Children
  - Prevent Chronic Disease

**Community Involvement Through Fit and Strong Together (FAST)**

The Hospital continues to lead the FAST Community Coalition, established in 2009. FAST is a uniquely positioned group, whose members represent a broad network of health experts, service providers, and community leaders.

The primary goal of this community-based coalition is to reduce childhood obesity and improve childhood health and wellness. FAST has been successful at initiating, attaining funding for, and/or implementing a number of programs relating to chronic disease; specifically aimed at impacting the resulting health-related issues arising from childhood obesity, poor nutrition and fitness. Comprised of representatives from the Hospital, health agencies, a fitness center, area school district, media, local YMCA, area library, insurers, and other organizations, they have made numerous presentations to insurers, providers, corporations, civic groups and others to raise awareness of their efforts and to engage the entire community. FAST has also successfully obtained funding for training, supplies, equipment and materials related to a number of the programs that have been implemented.

Of note, the most current BMI data reported by the New York State Department of Health (http://www.health.ny.gov/prevention/obesity/statistics_and_impact/student_weight_status_data.htm) show that the percent of elementary students in the Corning Painted Post School District (CPP District) who were overweight or obese has decreased over the past four years. For the period 2010 to 2012, a total of 35.9% of students fit that description; for the period 2012 to 2014, a total of 33.6% fit that description. State-wide the numbers rose slightly with 33.0% reported for the first time period, and 33.2% reported for the second time period. Data is reported every two years, making the 2014 information the most up-to-date available.

**OBESITY IN ADULTS AND CHILDREN**

**Childhood Healthy Lifestyles Pilot Project**

The Hospital continues to work with CPP District administrators and educators to develop healthy lifestyle programs for children. One of the newest programs, "Childhood Healthy Lifestyles," was recently designed with the assistance of Guthrie physicians and staff who have expertise in childhood obesity, health, wellness and fitness. These experts developed curriculum guidelines for the program, which were shared with the third grade teachers at the elementary school chosen for the pilot project. The educators then determined how it could best be implemented and incorporated into lesson plans.

Started during the 2015-2016 school year, the pilot program consists of 16 learning modules presented over 16 weeks. Knowledge assessments, developed by the educators, were administered
to the students at weeks five, 10 and 16 as a process measure. Additionally, a Tanita scale was used by participating students to measure their progress. The scale provides a body composition analysis, including calculations for percent body fat, muscle, bone, and water mass, as well as BMI and a metabolic age assessment. Response to the program has been very positive and, as a result, it is being continued during the current (2016-2017) school year. Further grant opportunities are being explored to support expanding this program to the entire elementary school, which serves children from kindergarten through grade five.

Actively engaging school representatives, teachers and parents has been key to the program’s acceptance and success. The program was introduced at an informational Open House for parents at the start of the school year. A Guthrie bariatric physician and exercise physiologist were on hand, along with district representatives, to discuss the rationale for the program, the expected benefits to participating children, as well as how it will be incorporated into children’s lessons and school day.

Cornell Cooperative Extension also participated in the pilot program. They provided a live "healthy cooking" demonstration at the school, open to third graders and their parents. They also made available a group and home counseling nutrition program for parents, comprised of six to eight sessions in groups or in one-on-one sessions.

This program, tailored specifically to elementary children, may be expanding in 2017. Members of FAST have been invited to meet with representatives of another regional school district to learn more about Childhood Healthy Lifestyles, for possible implementation in its third-grade class.

**Healthy Weight and Your Child Program**

Another new collaborative program is currently being piloted by the Corning community YMCA. Developed by YMCA USA, this evidence-based program is geared toward obese children between ages 7 and 13 who have a BMI percentile over 95. Children who participate must receive clearance from a health care provider or school nurse, and their parents/caregivers must attend all sessions. The program curriculum has been adapted from weight management programs that have shown that they are more effective when the entire family is involved and committed to adopting healthier habits.

The program started in early October of 2016, and is made up of 25 two-hour sessions, spread out over 15 weeks. Sponsored by YMCA USA in only six locations around the country, the Corning community is able to participate through its affiliation with the Rochester YMCA. A family-based, weight management program, Healthy Weight and Your Child is designed to engage the whole family, so they can understand how the home environment and other factors influence the choices that lead to a healthy weight.

Key elements of the program are nutrition education, portion control, and physical activity. The goals are to reduce BMI and waist circumference, reduce sedentary behaviors, increase physical activity, and improve self-esteem. Local pediatricians have identified children who might benefit from the program and public relations efforts have raised awareness about the program regionally. More information about this exciting pilot program may be found at [http://rochesterymca.org/healthyweight](http://rochesterymca.org/healthyweight).
**Healthy Food Choices - Guthrie Corning Hospital Cafeteria**
The Hospital has made a significant effort to address the nutritional content of the foods and beverages it offers to staff, patients and visitors. The Hospital has been redesigning its menu over the past two years, making a wider variety of healthy beverage and food choices available. The effort kicked off in 2014, by introducing a reduced sodium option of items on the menu, including entrees, vegetables, soups and gravies. Sodium-free seasoning alternatives are also provided, with salt shakers removed from cafeteria tables. This program was developed as the result of Steuben County’s selection by the New York State Department of Health to receive a sodium reduction grant (CDC-RFA #DP13-1301) offered by the Centers for Disease Control.

The grant also made possible the purchase of computer software that analyzes recipes, identifying nutritional content re: fat, carbohydrate, sugar, protein, etc. This information will be used to help modify cafeteria recipes to make foods healthier. Future plans call for all Hospital cafeteria foods to be labeled with this information, helping cafeteria users make more informed food choices.

Healthier snack options, such as dried fruits and nuts and granola bars, have been added and placed in high traffic and high visibility areas within the cafeteria to provide impulse buyers with healthier food choices. A yogurt bar has been added offering an expanded choice of yogurts. All of these changes have been well received by cafeteria users. Another effort - a water challenge - is in the planning stages. This program is being developed in partnership with Steuben County Public Health and Cornell Cooperative Extension and will be open to all residents of Steuben County. Incentives will be provided to encourage consumption of water instead of sweetened drinks.

As menu modifications are made they are communicated to physicians, employees and volunteers via an online newsletter available on the Hospital’s intranet. Corning Hospital staff are also actively participating in a system-wide wellness committee whose goal is to make similar changes throughout the Guthrie system.

**Reducing Sweetened Beverages - Guthrie Corning Hospital**
An analysis of all beverages either served in the Hospital cafeteria, or available for purchase from vending machines, has been completed. This included a breakdown of sugar content as well as beverage cost, usage, and revenue. Beverages with the highest sugar content have been removed from the cafeteria and are no longer served on inpatient meal trays. Pricing changes have been made to encourage purchase of beverages with lower sugar content. In addition, Hospital staff have worked with beverage machine vendors to eliminate beverages with the highest sugar content and replace them with other options with less sugar, such as flavored water. A color-coded system has been developed and is being used to label beverages, helping staff and visitors identify healthier choices.

**Corning Hospital "Kids Fun Run"**
A popular program with community youngsters and their parents, Corning Hospital held the 32nd Kids Fun Run this summer at its new campus. The event, which attracts hundreds of children and their parents, offers a series of races for kids ages two through 10, designed to promote healthy, active lifestyles. With pre-race entertainment and warm-up exercises, T-shirts, ribbons, and medals for the top-place finishers, this continues to be a well-received community event.
Other Community Collaboration
The FAST coalition also works closely with a number of community organizations to participate in and/or promote their activities geared towards children's health and fitness, such as:

- “Healthy Kids Day” is a day-long event organized by the Corning YMCA each April. Corning Hospital’s HealthWorks staff participates in this program, offering children, and their families, a variety of interactive activities to help them be better informed about the health benefits -- and fun -- gained from exercise. This annual community-wide event is quite popular and attracts hundreds of children and their families.
- The YMCA also offers a "Kids Marathon" program for children ages 7 - 12. The program provides training clinics and encourages young runners, joggers and walkers to complete the first 25 miles of a marathon at their own pace over a period of five weeks, with the last mile run as a group.
- Guthrie sponsors “Girls on the Run” offered through the Steuben Rural Health Network. This is a transformational physical activity-based program for girls in grades three through eight. A positive youth development program, "Girls on the Run" teaches important life skills through dynamic interactive lessons and running games. The program culminates with the girls being physically and emotionally prepared to complete a celebratory 5k running event. The Hospital's HealthWorks staff participate in this event.

PREVENTION AND MANAGEMENT OF CHRONIC DISEASE
The Hospital uses a variety of strategies and activities to prevent and manage chronic disease in the population it serves. Hospital physicians and staff are also actively involved with community-based organizations and participate in, sponsor and/or promote a variety of initiatives aimed at raising awareness about and improving general health and wellness, as well as those targeting individuals with specific diseases or health issues. Additional efforts on the part of Hospital staff support populations believed to be at risk for chronic illness, providing educational information and facilitating health screenings.

Community Health Day - Cancer Awareness
The Hospital held a very successful event at its campus designed to raise awareness about colorectal cancer. Free, take-home colorectal cancer screening kits were offered, which can be an effective tool in the early detection of cancer, as well as help determine whether a follow-up colonoscopy is required. Other event features included free risk assessments, educational materials, and an interactive model of a colon. Representatives from the American Cancer Society and the Steuben County Cancer Services program also participated.

Heart Health Seminars
The Hospital hosted two well-attended free community seminars on heart health in Sept. The first seminar included presentations about heart valve disease and the latest advancements in aortic stenosis. The focus of the second seminar was heart failure and heart arrhythmias. Guthrie Cardiologist Venu Thirumurti, MD and Physician Assistant Guy Rogers, MPAS, PA-C were the presenters. In addition to the presentations and a question and answer period, educational
information was available about such topics as CPR, smoking cessation, blood pressure screenings and much more.

**Community Seminar on Breast Cancer**
Guthrie hosted a free community seminar on breast cancer in the Fall. Topics covered included the importance of screenings, use of diagnostic tools to monitor breast health, and the various options available for treatment of breast cancer. Hospital radiologist Geneva Ballard, MD, and Guthrie radiologist Firdos Ziauddin, MD were the presenters.

**Tips for Active Lifestyles**
A free educational program, open to the community, was offered to provide participants with information designed to help them stay active and healthy. Topics included important lifestyle tips that can help ward off illness or minimize the effects of chronic disease, as well as maintain a vibrant, active lifestyle throughout one's life.

**Healthy Eating/Nutrition Seminars**
The Hospital offers several education programs designed to educate the general public about healthy eating habits and the impact nutrition has on staying healthy. Participants learn how to make smart food choices and receive tips on how to make small, easy changes to their diet for a healthier lifestyle. Attendees learn to identify the "big three" macronutrients in food, the five basic food groups, how to read food labels to compare nutritional content of foods and beverages, and changes they can make in their food choices that result in better nutrition and health.

The Hospital also offers a special Healthy Eating/Nutrition seminar geared toward helping participants eat a healthy diet through the holidays. Topics include nutrition basics, the types of foods that should be included in a healthy diet, and healthy eating tips to help people stay on track with their nutrition goals throughout the holidays, and into the new year.

**Community and Business Health Fairs**
The Hospital hosted a number of health and wellness fairs in communities across its service area throughout this year. These programs included basic nutrition classes, a Lunch and Learn program on important health topics, diabetes screening fairs, general wellness fairs, and several employer-based wellness events. In addition, the Hospital participated in a student career day at a local high school to provide information about the many types of careers available today in health care.

**Smoking Cessation**
Patients who smoke or use tobacco are encouraged to participate in smoking cessation programs. At present, patients who use tobacco are provided information about, and encouraged to contact, the Southern Tier Tobacco Awareness Coalition or the NY Quit Line, which offer smoking cessation services. Additionally, Corning Hospital Respiratory Therapists are adopting the same smoking cessation counseling and referral model being used at Guthrie Robert Packer Hospital, which will allow a standardized educational approach to smoking cessation.
Breastfeeding Friendly Hospital
Corning Hospital has aligned its policies and practices related to the importance of breastfeeding with those of Breastfeeding Friendly Hospitals. With Maternity Unit RNs certified in lactation consultation, new mothers are educated about the importance of breastfeeding and its health benefits for their infants. Pacifiers are not used in the hospital. In addition, breastfeeding pumps are provided so mothers can learn how to use them prior to discharge. As needed, mothers are referred to Steuben County Public Health nursing services for further lactation consultation at home.

Diabetes Awareness
Diabetes awareness/prevention activities have expanded at the Hospital. Diabetes educators from Corning Hospital’s HealthWorks staff hold an informational "wake up" day on diabetes awareness annually. As members of the Southern Tier Diabetes Coalition, HealthWorks diabetes educators offer diabetes screenings and diabetes resource information in conjunction with Diabetes Alert Day.

A number of Guthrie staff participated in the annual Southern Tier Diabetes Coalition Health Fair held in October 2016. This regional event supports those at risk of, or those already suffering from, diabetes. As well as having the opportunity to visit over 30 vendors, participants benefitted from free screenings for blood glucose levels, body fat, and blood pressure. Physician presentations, foot exams, body composition analysis and flu shots were also available. This year's event was held at one of the area's largest shopping malls that serves people from several counties. The Guthrie Diabetes Center and HealthWorks Wellness and Fitness Center hosted booths.

Guthrie staff also participated in the Juvenile Diabetes Research Foundation (JDRF) "Walk to Cure Diabetes" this year. The primary goal of JDRF is to find a cure for Type 1 diabetes, an autoimmune disease that strikes both children and adults of any age, and carries the lifelong threat of devastating health complications. They also helped organize and coordinate the American Diabetes Association Tour de Cure Finger Lakes 2016 bike ride. Both these events help raise awareness and make important educational information available throughout the community.

Access to Individualized Patient Information
Staff at Guthrie offices and facilities encourage patients to access their personal Electronic Health Record (eGuthrie), which offers patients a secure and convenient way to find a host of information about their health.

Once patients register online and receive their unique password, they can view test results, request a prescription refill, check vaccination records, request an appointment, trend laboratory results or other diagnostic tests over time, check the status of important health screenings - even send an email message to their physician. This important tool helps patients participate in their own care and empowers them to be knowledgeable about the health issues that impact them.

Use of eGuthrie has steadily increased since it was first made available to patients. In 2016, more than 42 percent of patients utilizing Guthrie services have active eGuthrie accounts and can electronically access their personal health information.
Wound Care Center Opens
A dedicated Wound Care Center opened at the Hospital in early 2016. This state-of-the-art center offers treatments for patients with chronic wounds that are failing to heal. The Wound Care Center features two hyperbaric oxygen chambers, with special treatment rooms for in-house procedures. Treatments are geared toward patients with diabetic ulcers, pressure ulcers, radiation burns and those with severe injuries resulting in tissue damage. The Hospital service area has a higher than average rate of residents with diabetes, a population especially vulnerable to non-healing wounds.

Corning Hospital Recognized for Quality Stroke Care
The Hospital received the American Heart Association/American Stroke Association's Get With The Guidelines®-Stroke Gold Plus Quality Achievement Award with Target: Stroke Honor Roll Elite. This is the sixth year that the group has recognized the Hospital with a quality award for the treatment of stroke. To receive this award hospitals must achieve 85 percent or higher adherence with all the Get With The Guidelines-Stroke achievement indicators for two or more consecutive 12-month periods. To qualify for the Target: Stroke Honor Roll Elite, hospitals must meet quality measures developed to reduce the time between the patient's arrival at the hospital and treatment. The Hospital measured well over the targets for many of these quality measures, which are designed to help hospital teams follow the most up-to-date, evidence-based guidelines with the goal of speeding recovery and reducing death and disability for stroke patients.

Guthrie Recognized as a Gold-Level Fit-Friendly Worksite
Guthrie has been recognized by the American Heart Association for helping employees eat better and move more. This is the first time that Guthrie has received this honor. This designation underscores the importance Guthrie places on employee wellness, and providing the best workplace environment possible. Over the past year, Guthrie’s Wellness Committee has worked to introduce a number of new initiatives that have encouraged and supported staff members to lead healthier lives, even at the work place. These initiatives include regular free Wellness seminars, the introduction of healthier meal and snack options in Guthrie hospital cafeterias, and encouraging staff to be more active at work by designating walking paths at a number of sites.

Guthrie Receives Most Wired Award
This is the sixth consecutive year and the tenth time in fourteen years that Guthrie has been recognized with a Most Wired award. The survey showed that health data security and patient engagement are critical priorities for the health care systems who received this prestigious award. Earning this award reflects Guthrie's commitment to creating one of the most advanced, safe and accessible systems for our patients and employees.

At Guthrie, patient engagement and the security of health data are top priorities, and the organization continually strives to provide state of the art, secure information services. The Most Wired Hospitals award is given annually by Hospitals & Health Networks magazine to the top hospitals and health systems in the country making the most progress in the adoption of health information technology.
Community Health Needs Assessments Completed
Guthrie has published its most recent community health needs assessments and implementation plans for the communities served by its four hospitals, including Corning Hospital, and may be found at https://www.guthrie.org/about-us/community-benefits/community-health-needs-assessment. Assessments include information on local and regional demographics, insurance coverage and key health challenges. Based on this data, priorities are established, and projects designed to address critical health issues. Additionally, Corning Hospital actively participates in Smart Steuben, a county-wide consortium made up of representatives from all Steuben County hospitals, health agencies and Public Health.

Hospital Auxiliary Reaches Goal
The Hospital has a very active and engaged group of Auxilians who hold a number of fund raising events in the community throughout the year to support the Hospital's equipment needs. This year, the Auxiliary's very successful "Valentine Ball," attracted more than 300 people and raised nearly $70,000, allowing the Auxiliary to meet their generous multi-year pledge of $250,000 in support of the facility's Cancer and Infusion Center. A feature of this year's event was a special guest, a cancer survivor who shared the moving story of her personal journey, and the outstanding care she received, with those attending.

Hospital ICU Acquires New Patient Monitoring Tool
The Hospital recently put a new diagnostic tool in place in its ICU. The APACHE (Acute Physiology Age Chronic Health Evaluation) is a sophisticated computer program that predicts outcomes for critically injured adults. For each ICU patient, 27 variables are entered into the system - some automatically from the patient Electronic Health Record with others entered manually by staff. They include vital signs, lab values, diagnosis, chronic health information and age. APACHE uses this data to formulate individualized predictions about length of stay, need for active treatment, and more - all of which can quickly provide important clinical information to physicians and staff.

Safe Medication Disposal Unit Installed
The Hospital has installed a MedSafe medication disposal unit at its facility. Located near the hospital pharmacy, the unit provides a way for patients, staff and community members to safely and anonymously dispose of unused or expired medicines and controlled substances. Availability of the unit can help eliminate or reduce the improper disposal of medications, minimizing the negative impact on the environment and the safety of drinking water.

Cancer Center Offers "Soup for the Soul"
Volunteers and local businesses worked together to treat patients and their caregivers to a special hot lunch during the winter months while they are at the Cancer Treatment Center. The soup served is donated by local restaurants and served by volunteers each weekday at the Cancer Center. Patients and families have been very appreciative of the program, especially since infusion times often begin or end at lunchtime. This unique project, led by a Hospital volunteer, quickly gained support from the entire Cancer Center team.
Giving Moms and Children a Helping Hand
Hospital staff undertook two programs this year in support of new moms and elementary school-aged children. The first was a diaper drive in January, held to benefit low-income families in Chemung and Steuben Counties. Employees, volunteers and community members donated diapers and cleansing wipes, which were then distributed to families in need by WIC (Women, Infants and Children) offices throughout the county. Another group of Hospital staff made a donation of school supplies and backpacks, which were given to a local elementary school for distribution to children in need.

American Cancer Society Relay for Life
Corning Hospital participated as the primary sponsor for the American Cancer Society's local Relay for Life event in 2016. The Hospital actively participates in this well-attended community-wide event each year by raising money and forming teams of walkers. This year the Hospital also hosted the pre-event survivor dinner.

Giving the Gift of Life
The Hospital remains committed to promoting and supporting the efforts of the American Red Cross in sustaining the availability of life-saving blood and blood products. In 2016, the Hospital has hosted six blood drives, resulting in 124 units of blood collected to date. At this writing, one more blood drive is scheduled to take place on the Hospital campus before the end of the year.

GUTHRIE CORNING HOSPITAL SERVICES

Guthrie Corning Hospital
Guthrie Corning Hospital opened its new, state-of-the-art facility to patients in July 2014. The two-story, 225,000 square foot facility is situated on a 67-acre site at One Guthrie Drive in Corning, N.Y. The hospital features all private inpatient rooms including medical/surgical, intensive care and labor and delivery suites. Guthrie Corning Hospital is equipped with the latest technology and equipment supporting state-of-the-art surgical suites, procedure rooms, an on-site cancer center and a 24-hour emergency department with a Fast Track care option, as well as a helipad for urgent transport of critically ill and injured patients. The Hospital also offers a dedicated Wound Care Center. Opening in 2016, the Wound Care Center provides specialized treatments and hyperbaric medicine to those with difficult to heal wounds.

Guthrie Corning Cancer Center and Infusion Services
Cancer treatments and Infusion services are offered in an 18,000 square foot facility located at Two Guthrie Drive in Corning, N.Y., adjacent to the new Guthrie Corning Hospital. This new facility offers a warm, welcoming and comfortable environment for patients and their families. The spacious treatment area allows for both group and private infusion spaces for a personalized treatment experience. Guthrie’s team of experts provides customized care plans using today’s technologies and advances in cancer care including access to clinical trials.
**Guthrie HealthWorks Wellness & Fitness Center**
Guthrie Corning Hospital's 45,000 square foot rehabilitation and fitness facility, is located at 9768 Liberty Drive in Painted Post, N.Y. This award-winning facility helps individuals and families reach their personal fitness goals with guidance and coaching from HealthWorks’ professional staff in the areas of disease management, fitness conditioning, health enhancement, as well as injury recovery and lifestyle improvement. This facility is also home to a sleep study department; a blood collection laboratory; the Guthrie Erwin physician office, offering primary care and cardiology services; and a comprehensive rehabilitation services department offering therapies such as aquatic, cardiac, physical, occupational, speech and more.

**Guthrie Same Day Surgery Center**
This facility was the first multi-specialty ambulatory surgical center of its kind in the region, offering a comfortable setting and convenient location to patients. Located at 31 Arnot Road in Horseheads, N.Y., the Guthrie Same Day Surgery Center features two operating rooms and two endoscopy suites with private and comfortable patient accommodations. This spacious, outpatient surgery center is conveniently located within a Guthrie physician office facility and is a department of Guthrie Corning Hospital. Guthrie Same Day Surgery Center surgeons and staff members coordinate patients’ care needs with Guthrie diagnostic, primary and specialty providers located at Guthrie offices throughout the region.

To learn more about Guthrie Corning Hospital and take a video tour, please visit https://www.guthrie.org/location/guthrie-corning-hospital.
